ENGINEERING PROFILE

Senior Software Engineer with 7+ years designing, scaling, and operating distributed systems, cloud-native platforms, and AI-enabled enterprise services. Experience spans Java/Spring and Dropwizard, Azure/AWS, high-volume data pipelines, system design, and production operations. Combines HLD/LLD with end-to-end ownership, from architecture through on-call reliability.

ENGINEERING IMPACT

95%

less manual station-mapping
entry

50K+

concurrent requests supported

+25%

data-service throughput

99.9%

service availability

SELECTED ENGINEERING OUTCOMES

CVENT | AGENTIC AI

Automating global station mapping

Agentic AI, prompt engineering, and orchestration cut manual mapping by 95% while maintaining 100% data consistency.

95%

less manual entry

CVENT | DISTRIBUTED SYSTEMS

Scaling services with production ownership

Partitioning and load balancing supported 50K+ concurrent requests and raised throughput. Served as global on-call DRI.

50K+

requests supported

+25% throughput

CVENT + PETRO IT | PLATFORM

Modernization and data reliability

Moved .NET monoliths to Java/Dropwizard microservices (+20% fault tolerance); synchronized 10M+ records with 100% audit reliability.

10M+

records synced

100% audit logs

PROFESSIONAL EXPERIENCE

● Cvent	APR 2022 - OCT 2026
Senior Software Engineer - Automated global train-station mapping with agentic AI, prompt engineering, and orchestration: 95% less manual entry and 100% data consistency. - Architected Azure OpenAI extraction with prompt design, validation, and integration patterns; feature usage rose 70% and manual workflows were eliminated. - Designed modular services for 50K+ concurrent requests; partitioning and load balancing raised throughput 25%. Maintained 99.9% availability as global on-call DRI. - Modernized .NET monoliths into Java/Dropwizard microservices with circuit breakers, leader election, and retries; improved fault tolerance 20%. Authored HLD/LLD.	MAR 2025 - OCT 2026
Software Engineer II - Built Couchbase/XML sync for 10M+ records with 100% audit logging reliability; reduced booking API latency 15% with caching and SQL tuning. - Shipped GraphQL/Apollo inventory APIs for thousands of concurrent requests and automated observability pipelines, reducing MTTD 30%.	APR 2022 - MAR 2025
● Petro IT	DEC 2018 - APR 2022
Senior Associate Software Developer Built a CNN document classifier with 90%+ accuracy; migrated MongoDB to AWS, reducing infrastructure cost 15%. Automated Shell/Jenkins deployments, cutting manual cycles 40%.	NOV 2021 - APR 2022
Associate Software Developer Built Spring Boot/Kafka pipelines for 1M+ daily events; improved Firebase/MongoDB data consistency 100% and cut downtime 25% with ELK observability.	APR 2019 - NOV 2021
Android Developer Built Pipetrak, a React Native, Java, and Firebase app for field-data capture and synchronization.	DEC 2018 - APR 2019

TECHNICAL TOOLKIT

LANGUAGES AND FRAMEWORKS Java, Spring Boot, Dropwizard, Python, SQL, JavaScript.	CLOUD AND INFRASTRUCTURE Microsoft Azure, AWS (EC2, S3, RDS, MSK), Kubernetes, Docker, Jenkins, CI/CD.
SYSTEMS AND MESSAGING Distributed systems, microservices, Kafka, Apache Camel, RabbitMQ, GraphQL, HLD/LLD.	DATA AND OPERATIONS MS SQL, MongoDB, Couchbase, Firebase, Redis, SRE, ELK Stack, observability, performance tuning.
AI AND DEVELOPER PRODUCTIVITY Agentic AI, AI agents, MCP, prompt engineering, Azure OpenAI, ChatGPT, GitHub Copilot, Claude.	

EDUCATION AND CERTIFICATIONS

EDUCATION

B.Tech, Computer Science and Engineering

SRM Institute of Science and Technology | 2019 | GPA 8.9

AISSCE, Grade XII

Modern School | 2015 | 93%

CERTIFICATIONS

- Microsoft Azure Cloud Architect
- Machine Learning - Stanford University
- Cloud Native Computing Fundamentals - openSUSE
